wide range of flavivirus diseases, e.g. yellow fever, Japanese encephalitis, dengue, classical swine fever, bovine viral diarrhoea and hepatitis C. The specified deletion: (i) produces a reliably attenuated virus that does not revert to virulence; (ii) is exactly defined and does not effect immune responses to important proteins; and (iii) can not generate a non-natural virus by recombination. The mutant viruses eliminate the need to produce large amounts of infectious/virulent viruses, and can be produced with less expense. The protective response to flavivirus lasts significantly longer than that to killed vaccines. This sequence represents a fragment of the capsid protein from Hepatitis c virus (HCV) type I described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HCV; E1; envelope 1; core protein; HCV genotyping; antibody; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR92936-R92987 are HCV core proteins derived from 52 different HCV isolates. Isolated cDNA sequences are used for the prodn of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, saliva, lymphocytes or other mononuclear cells. The antibodies may be used in the prevention of HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA and amino acid sequence of HCV envelope 1 and core proteins - used to determine HCV genotype and as vaccines against HCV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            100.0%; Score 151; DB 17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                              The invention relates to a mosaic protein, comprising a plurality of homologous antigenic peptides from different genotypes of a species. The artigenic peptides are from nucleocapsid (NC) proteins. A method for synthesising an artificial gene that encodes the mosaic protein is also provided. The method is designated restriction endonuclease assisted ligation (REAL). The mosaic protein and the artificial mosaic protein are useful for detecting a hepatitis infection in an individual. The mosaic gene and protein is also useful for vaccination against infection, especially hepatitis C. The method of synthesizing the artificial gene and the resulting mosaic protein improve the sensitivity, spectrum of immunoreactivity, and antigen specificity of enzyme immunoassays. This provides improved detection of hepatitis C virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel attenuated flavivirus live vaccine comprising a flavivirus mutant that has a deletion of at least 4 consecutive amino acids from the capsid protein, provided that the C-terminal hydrophobic region is not affected by the deletion. The vaccine of the invention has virucide, antinflammatory and hepatotropic activity. The attenuated vaccine, and similar nucleic acid vaccines that encode the mutated capsid protein, are useful for protection against a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Attenuated flavivirus live vaccine, useful for protection against e.g. yellow fever, comprises virus with attenuating deletion of amino acids

                                                                                                                                                                                                                                                                                                                                                                                              AAR92936-R92987 are HCV core proteins derived from 52 different HCV isolates. Isolated cDNA sequences are used for the prodn of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, sallva, lymphocytes or other monounclear cells. The antibodies may be used in the prevention of HCV infection.
                                                                                                                                                                                                                                                                                                                   DNA and amino acid sequence of HCV envelope 1 and core proteins - used to determine HCV genotype and as vactines against HCV infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAR92936-R92987 are HCV core proteins derived from 52 different HCV isolates. Isolated cDNA sequences are used for the prodn. of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, saliva, lymphocytes or other mononuclear cells. The antibodies may be used in the prevention of HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Isolated cDNA sequences are used for the prodn. of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, sellva, lymphocytes or other monounclear coils. The antibodies may be used in the prevention of HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA and amino acid sequence of HCV envelope 1 and core proteins - used to determine HCV genotype and as vaccines against HCV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                / Match 99.3%; Score 150; DB 17; Length 191; Local Similarity 96.4%; Pred. They esp, from the novel subtypes la-f, 2e-i, 2k, 2l, 3q, 4k-m, 7a-c or types 9, 10 or 11. The sequences corresp. to the 5' untranslated region (UR), the Core/El, NS4 or NS5B regions of the genome. This sequence represents amino acids 1-317 from the HCV types 7c and 8a isolates VM4.

The new HCV types were isolated from patients with chronic HCV from the Benelux countries, France, Cameroon and Vietnam, because of their abenelux countries. France, Cameroon and Vietnam, because of their abenelux countries. France, Cameroon and Vietnam, because of their applified, cloned and genotyped. The 5'UR, Core/El and NSSB regions were sequenced aither directly or patielally and used to classify the new viruses into (sub)types based on comparison with known sequences. The sequences can also be used to synthesise probes and primers for the sequences can also be used to synthesise probes and primers for the detection of HCV in a sample. The polypeptides can be used to detect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cDNA was prepared from HCV genomic RNA. Full-length clone JK1-B (9405 nucleotides long) and 14 shorter clones were isolated by PCR amplification, including clone JX3-C. Primer/probes derived from the sequences of these clones can be used in diagnostic assays for HCV.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDNA was prepared from HCV genomic RNA. Full-length clone JK1-B (9405 nucleotides long) and 14 shorter clones were isolated by PCR amplification, including clone JK3-B. Primer/probes derived from the sequences of these clones can be used in diagnostic assays for HCV. See AAQ40425-Q40439.

Full-length clone JK1-B (9405 nucleotides long) and 14 shorter clones were isolated by PCR amplification, including clone JK3-A. Primer/probes derived from the sequences of these clones can be used in diagnostic assays for HCV.
                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-APR-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a mosaic protein, comprising a plurality of homologous antigenic peptides from different genotypes of a species. The antigenic peptides are from nucleocapsid (NC) proteins. A method for synthesising an artificial gene that encodes the mosaic protein is also provided. The method is designated restriction endonuclease assisted are useful for detecting a hepatitis infection in an individual. The mosaic gene and protein is also useful for vaccination against infection, especially hepatitis C. The method of synthesizing the artificial gene and the resulting mosaic protein improve the sensitivity, spectrum of immunoreactivity, and antigen specificity of enzyme immunoassays. This provides improved detection of hepatitis C virus. Sequences ANYOGGS12681 represent amino acid sequence of each monomer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polymerase chain reaction; PCR; amplify; primer; non-A, non-B hepatitis; NANBH; virus; blood transmissible; detection; hepatitis virus; RT-PCR; C100 antibody; HCV RNA; NSS region.

```
N-terminal portion of a coding sequence of RNA virus, a second polynucleotide region including a 3' untranslated region (UTR) sequence of the RNA virus and at least a C-terminal portion of a coding sequence of the virus and a third polynucleotide region encoding a reporter molecule, flanked by first and second polynucleotide regions; and a promoter sequence being operatively linked to expression cassette in a manner so as to enable a transcription of a minus strand RNA molecule from the expression cassette. Nucleic acid construct of the invention is useful for detecting the presence of an RNA virus in a cell. It is also useful for screening anti-viral drugs and determining drug resistance of an RNA virus. The present sequence is Hepatitis C virus (HCV) isolate HCV-SI full-length polyprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of an antiqen used in a novel assay determining anti-HCV antibody titre. A sample is diluted to an absorbance of not more than 2.0 and the peptide antigen is added. The method is useful for monitoring the effect of interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determination of the antibody titre against hepatitis C virus antigen - using dilute solution and HCV antigenic peptide(s)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HCV; non-A, non-B hepatitis virus; antigen; immunoassay; interferon treatment; monitoring; antibody titre; detection

                                                                                                                                                                                                                         This sequence is encoded by the genome of a blood transmissible non-A, non-B hepatitis (NANBH) virus. The CDNA sequence was isolated using the primers given in AAQ63500-35. The amplified fragments are used in the detection of hepatitis virus. The target DNA was isolated from serum of chronically infected NANBH patients who were Cl00 antibody-positive were performed on cDNA and the total human NANBH DNA was constructed from 23 clones.

                                                                                                                                                                                                                                                                                                                                                                                                                                                AAR74561-63 and AAR74566 are respectively, 24mer, 40mer, 50mer and 30mer antigenic peptides derived from the hepatitis C virus clone S29 genes III and IV. They are useful in the detection of and diagnosis of Hepatitis C virus infection. The peptides are used in a detection method which has a higher sensitivity than conventional detection agents.

Genome polyprotein - hepatitis C virus (genotype 3, NI) (fragment)
N.Contains: core protein
C.Species: hepatitis C virus
A.Variety: genotype 3, NI
C.Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C.Accession: $41358
R.Van Doorn, L.J.; Kleter, G.E.M.; Brouwer, J.T.
Submitted to the EMBL Data Library, January 1994
A.Description: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A.Reference number: $41341
A.Accession: $41358
A.Molecule type: genomic RNA
A.Residues: 1-114 < VANA
A.Residues: 1-114 < VANA
A.Residues: 1-114 < VANA
A.Cross references: EMBL: 229461; NID: 9443884; PIDN: CAA82599.1; PID: 9443885
A.Gross references: Embl. C virus genome polyprotein
C.Superfamily: hepatitis C virus genome polyprotein
C.Superfamily: hepatitis C virus genome polyprotein
C.Superfamily: hepatitis C virus genome polyprotein
F:1-114/Product: core protein #status predicted < CMAT>

genome polyprotein S29 (core protein region) - hepatitis C virus (fragment)
C;Species: hepatitis C virus
C;Species: hepatitis C virus
C;Date: 20-Feb-1995 #sequence_revision 19-Apr-1996 #text_change 17-Nov-2000
C;Accession: S21336
A;Description: A sentitive serodiagnosis of hepatitis C virus infection with two c A;Reference number: S21336
A;Accession: S21336
A;Accession: S21336
A;Molecule type: genomic RNA
A;Residues: 1-88 (SAT>
                                                                                                                                                                                                                                                   from a single Japanese
                                           genome polyprotein - hepatitis C virus (strain JT)
N;Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98)
protein NS4s; nonstructural protein NS4b; nonstructural protein NS5
C;Species: hepatitis C virus
C;Date: 19-May-2000 #sequence_revision 19-May-2000 #text_change 19-Jan-2001

Gondafins: envelope protein E1; nonstructural protein E2/NS1

Species: hepatitis C virus

Contains: envelope protein E1; nonstructural protein E2/NS1

Species: hepatitis C virus

Catesion: PC2060

C; Accession: PC2060

"Genomic characterization and mutation rate of hepatitis C virus
isolated from a patient who contracted hepatitis during an epidemic
of non-A, non-B hepatitis in Japan.";
J. Gen. Virol. 73:2725-2729(1992).
-I- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN MAND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polyprotein; Glycoprotein; Coat protein; Envelope protein;

-!- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL 3NA REPLICATION.
-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN A MAD GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-92230232: PubMed-1314459; Okamoto K., Lizuka H., Okada S.I., Yamamoto K., Lizuka H., Tanaka T., Fukuda S., Tsuda F., Mishiro S.; "Full-length sequence of a hepatitis C virus genome having poor homology to reported isolates: comparative study of four distinct

Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21) (EC 3.4.22.-); Proteases/helicase NS3 (P70) (Heperivirin)
(EC 3.4.21.98); Nonstructural protein NS5A (P56); Nonstructural protein NS5A (P65); Nonstructural protein NS5A (P670) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
                                                                                     Protein.
REWOVED FROM CADSID PROTEIN C BY THE
CELLULAR AMINOPEPTIDASE.
CAPSID PROTEIN ( POTEWIAL).
MATRIX PROTEIN (POTEWIAL).
MATRIX PROTEIN (POTEWIAL).
NONSTRUCTURAL PROTEIN NSI/E2 (POTEWIAL).
NONSTRUCTURAL PROTEIN NSI/E2 (POTEWIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

THE ENVELOPE CONSISTS OF TWO PROTEINS: E1 AND E2. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
-1- PTM: THE STRUCTURAL PROTEINS C, E1 AND E2 ARE PRODUCED BY PROTEOLYTIC PROCESSING BY THE HOST SIGNAL PEPTIDASES.
-1- SIMILARITY: THE NS2 PROTEASE BELONGS TO PEPTIDASE FAMILY U39.
-1- SIMILARITY: THE NS3 PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-AUG-1992 (Rel. 23, Created)
01-AUG-1992 (Rel. 23, Last sequence update)
15-SEP-2003 (Rel. 24, Last annotation update)
Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP69) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.22.); Proteases/Helicase NS3 (P70) (Hepaclylin)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate 1) (HCV).
Viruses; SBNNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.

CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4

FUNCTION: FURIN IS LIKELY TO REPRESENT THE UBIQUITOUS ENDOPROTEASE CACTUATY WITHIN CONSTITUTIVE SECRETORY PARHWAYS AND CAPABLE OF CLEAVAGE AT THE RX(K/K)R CONSENSUS MOTIF.
CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of Arg-Yaa-Yaa-Arg-1-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Lys. Releases albumin, complement component C3 and von Willebrand factor from their
                                                                                                  COFACTOR: CALCIUM-DEPENDENT.
ENZYME REGULATION: COULD BE INHIBITED BY THE NOT SECONDLY CLEAVED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY).

A natural intergenctypic recombinant of hepatitis C virus identified
in St. Petersburg...;
J. Virol. 76:4034-4043(2002)...
I. POBDNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
ILPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 25, Sequence 191, Sequence 175, Sequence 175, Sequence 175, Sequence 6, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 2, S

Patent No. 603071
GENERAL INFORMATION:
APPLICANT: KILDS.
APPLICANT: FIELDS, HOWARD A.
TITLE OF INVENTION: MOSAIC PROTEIN AND RESTRICTION
TITLE OF INVENTION: ENDONUCLEASE ASSISTED LIGATION METHOD FOR MAKING THE SAN NUMBER OF SEQUENCES: 55
CORRESPONDENCE ADDRESS:
ADDRESSEE: JONES & ASKEW, LLP
STREET: 191 Peachtree Street, N.W., 37th Floor
CITY: Atlanta
                                                                                                                                                                                                                                                                                                                                                                COUNTRY: USA
ZIP: 30303-1769
COMPUTER READABLE FORM:
MEDIUM TYPE: Elloppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/NS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/921,887
FILING DATE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CLASSIFICATION: 435

NEW SEQUENCES OF HEPATITIS C VIRUS GENOTYPES
AND THEIR USE AS PROPHYLACTIC, THERAPEUTIC AND DIAGNOSTIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 230, Application US/08635886C
Sequence 230, Application US/08635886C
Patent No. 6555114
GENERAL INFORMATION:
APPLICANT: LERCOUX-NOELS, Geert
APPLICANT: MAERTENS, Geert
TITLE OF INVENTION: URMUNDOMINANT HUMAN T CELL EPITOPES OF HEPATITIS C
TITLE OF INVENTION: VIRUS
FILE REFERENCE: 2752-18
CURRENT APPLICATION NUMBER: US/08/635,886C
CURRENT FILING DATE: 1994-10-28
PRIOR APPLICATION NUMBER: PCT/EP94/03555
PRIOR FILING DATE: 1994-10-28
PRIOR FILING DATE: 1993-11-04
NUMBER: OF SEQ. DID NOS! 286

Sequence 1, Application US/09758308
Patent No. US200200906071
GENERAL INFORMATION:
APPLICANT: HOWARD A. FIELDS AND YURY E. KHUDYAKOV
TITLE OF INVENTION: ANTIGENIC EPITOPES AND MOSAIC POLYPEPTIDES OF HEPATITIS C \( \) TITLE OF INVENTION: PROTEINS
FILE REFERENCE: 14114.034902
CURRENT APPLICATION NUMBER: US/09/758,308
PRIOR FILING DATE: 2001-01-10
PRIOR FILING DATE: 60/092,339
PRIOR FILING DATE: 1999-07-10
NUMBER OF SEQ ID NOS: 5
SOFTWARE: Patentin version 3.0
ENGTHARE: Patentin version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
